INT-CL (IPC): G11B005/09

ABSTRACTED-PUB-NO: US 5583838A

BASIC-ABSTRACT:

The appts. includes a head for recording data successively on a recording medium by its movement relative to the recording medium. A driving device imparts relative movement between the recording medium and the head. A decoding device decodes recording time data that has been recorded on the recording medium. A control device controls the data recording rate to be proportional to the recording time data decoded by the decoding device so as to record at a constant linear recording density. The control device includes a memory which stores data for recording on the recording medium. A velocity controller controls the relative speed between the recording medium and the head imparted by the driving device based on an amount of information

stored in the memory.

ADVANTAGE - Obtains high quality recording signals in recording on recording medium such as CD-R disk. Capable of recording at high speed.
